1. Be able to label a diagram or a model of a human brain including the following parts and tell briefly what each part does.

   medulla __________________________________________________
   __________________________________________________________

   pons _______________________________________________________ 
   __________________________________________________________ 

   cerebellum ________________________________________________ 
   __________________________________________________________ 

   midbrain __________________________________________________ 
   __________________________________________________________ 

   thalamus __________________________________________________ 
   __________________________________________________________ 

   hypothalamus ______________________________________________ 
   __________________________________________________________ 

   pituitary gland ____________________________________________ 
   __________________________________________________________ 

   cerebrum __________________________________________________
   __________________________________________________________

2. What is a neuron?

   __________________________________________________________
   __________________________________________________________
   Draw a picture of a typical neuron and label it's parts.
Where does information enter a neuron and where does information leave from?

-------------------------------------------------------------

☐ 3. Explain how drugs affect the function of neurons especially at the 'synapse'.

-------------------------------------------------------------

Make a commitment never to take drugs except for medical reasons.

☐ 4. What is a reflex?

-------------------------------------------------------------

Perform a knee-jerk reflex test on someone. (Instructions: Gently tap someone just below the knee-cap while the person's leg is hanging over the edge of a chair.). Explain why it occurs (use the following terms in your answer: sensory neuron, motor neuron, spinal cord).

-------------------------------------------------------------

-------------------------------------------------------------

Why do doctors use this test in a physical exam?

-------------------------------------------------------------

☐ 5. What is a sensory neuron?

-------------------------------------------------------------

What is "adaption". Demonstrate adaption by doing the following:

a. Rest your arm on a table and then place a small cork (or something very light) on your arm. Notice how it feels at that time and how it feels one minute later after not moving.

b. Place one finger of one hand in a bowl of cool water and another finger of the other hand into a bowl of warm water. After 30 seconds, put both fingers in to a bowl of water at room temperature. How does the water at room temperature feel on each finger?
c. What spiritual lesson can be drawn from the concept of adaption?

6. How are the senses of taste and smell similar and how are they different.
Similar __________________________________________________________

Different ________________________________________________________

Draw a map of which part of the tongue responds to the following tastes. **Instructions:** Have someone dip a Q-tip into one of the following: sugar water (for sweet), lemon juice (for sour), flat tonic water (bitter) or salty water (salt), and then lightly touch different parts of your tongue. Notice which areas of the tongue taste the solution that is being tested. Rinse with pure water between each test and use a new Q-tip for each test.

<table>
<thead>
<tr>
<th>Sweet</th>
<th>Sour</th>
</tr>

<tbody>
<tr>
<td>Bitter</td>
<td>Salt</td>
</tr>
</tbody>
</table>
7. Draw a picture of the various parts of the eye and explain why you have a blind-spot. Find your blind-spot for one eye. **Instructions:** Place a very small black dot on the center of a white piece of paper. Close one eye and stare directly ahead. Hold the paper at arms length in front of you and move the paper until the spot "disappears" (usually this occurs when the dot is just a bit below eye level—it is important).

8. Describe the three basic parts of the ear and tell what each part does.

<table>
<thead>
<tr>
<th>Basic Parts</th>
<th>Function</th>
</tr>
</thead>

<td>1.</td>
<td></td>
</tr>
<tr>
<td>2.</td>
<td></td>
</tr>
<tr>
<td>3.</td>
<td></td>
</tr>
</tbody>
</table>

Explain why the following activities can be bad for your hearing:
- listening to a "walkman"
- putting something long in your ear
- being in the front row at a loud music concert
not treating an ear infection properly

standing behind a jet at an airport

__________________________________________________________

__________________________________________________________

☐ 9. Do one or more of the following activities: (some of these activities will need to be planned with a medical/dental professional or at a local college or university—they are usually very willing to assist you)
   a. Observe an electroencephalogram or one being performed on someone and describe what can be learned from this test.
   b. Watch a "lie-detector" test being performed. Briefly explain how one works.
   c. Observe an MRI or one being performed and explain what information can be learned from such a test.
   d. Observe a neuron under a microscope.
   e. Observe someone receiving an local or general anesthetic and explaining how an anesthetic works.
   f. Observe a real human brain (fresh or preserved)

☐ 10. List at least 5 things that you can do to protect your brain from damage.
   1. _______________________________________________________
   2. _______________________________________________________
   3. _______________________________________________________
   4. _______________________________________________________
   5. _______________________________________________________

☐ 11. Do one of the following:
   a. Visit and help care for someone (minimum of 2 hrs) who has a disease of the brain and report on their special needs.
   b. Briefly describe the following disorders of the nervous system:
      Alzheimer's Disease ______________________________________
      Multiple Sclerosis ______________________________________
Find at least three references from the Bible that refer to your brain and/or to decisions that you make in life.

1. __________________________
2. __________________________
3. __________________________
